Garden Room is Fully Grown

St. Mary's Montessori Nursery were the proud owners of a new log cabin back in 2003, so when they decided to invest in a new Extension and Garden Room project, a timber building built by Rural Log Cabins was their natural choice.

After successfully putting together an impressive scheme, the nursery was awarded a local authority grant. As builder of their original log cabin, Rural Log Cabins was asked to submit a competitive quote for the project along with other contractors.

After a short period of consultation and consideration, Rural Log Cabins was awarded the construction contract. Proprietor Sue Ensor-Keen commented ***"It was satisfying to award the contract to the most competitive price but also to a trusted previous Timber Cabin builder"***

The new Garden Room was to occupy an upper garden area that was currently housing some storage sheds and a small toilet and sluice. The new Garden Room design incorporates a replacement toilet facility and also a connecting

corridor extension into the main nursery building thus making excellent use of the available space.

Provided within the design was an upper floor storage space which was much greater than the space provided by the current storage sheds. The Garden Room provides much needed additional space for this thriving local nursery, giving the children more space in a relaxed and beautiful setting.

Work on the project began and Rural Log Cabins worked on-site during the normal nursery hours and without causing any significant impact on the normal routine of both staff and children. The children were actively encouraged to take an interest in the project, one of the older children was even appointed honorary Clerk-of-Works for the job. As a result of the children's interest, a miniature builders yard area has been created for future "Builders Play" activities with the children.

Sue Ensor-Keen commented ***"Rural Log Cabins have been really professional and responded quickly to all of our requests for prices, information and design. They started work on site very soon after the grant was confirmed and have kept us informed of all the important day to day issues as the project has progressed to the completed Garden Room"***

Along with the upper floor storage, the design includes many features

that give it that extra dimension, vertical rather than horizontal cladding, large sliding patio doors, large loft, side and circular windows to give extra character to the building and to allow natural light to flood the interior spaces.

Unique design features add an extra dimension.

The project was completed using timber from certified sustainable sources and as the entire project was constructed on-site, with no prefabricated sections used and materials sourced locally, the total environmental impact for the building was kept to an absolute minimum.

The whole project was completed on schedule and now St. Mary's has a stunning new Garden Room and is the envy of its competitors.

At Rural Log Cabins we always make it our business to give our customers exactly what they are looking for.

A beautiful & functional addition to a thriving nursery.
